

I was suffering from blood pressure, sugar, gastritis, back pain and many other problems before surgery. My sugar level normally ranged between 260 to 300 for which I used to take insulin and oral medications, where then I decided to meet Dr. Deep Goel and his team, Bariatric surgeon, he explained me about different types of bariatric procedures in detail. My surgery was done on October 2014 and I have already lost 24 Kg in three months and most importantly I am free from all the obesity related problem. The most happiest part of the surgery is that I am no longer taking medicines for diabetes.
